WORK EXPERIENCE

DaveCodes.Tech

July 2024 – Current

Freelance Full Stack Software Engineer

New York, NY

- Collaborated with clients to deeply understand and align with the business objectives, leveraging a strategic approach to seamlessly translate complex ideas into high-impact, scalable web applications.
- Resolved technical challenges through effective identification, troubleshooting and analytical thinking, ensuring optimal website performance and seamless user experiences.
- Applied agile methodologies, including SCRUM, to ensure on-time project delivery while actively coordinating with stakeholders to maintain alignment and transparency throughout the development process.

Schneider Freight USA

January 2022 – June 2024

Trade Lane Supervisor

Valley Stream, NY

- Coordinated and optimized unique import/export routes, managing transportation logistics that ensured on-time deliveries while reducing overhead costs through strategic vendor negotiations.
- Executed cost-saving strategies through effective negotiations with six service providers, achieving a 30% reduction in transportation fees and enhancing the overall budget alignment for project initiatives.
- Supervised and guided a diverse group of 4 team members, developing tailored training that resulted in an increase in customer satisfaction and improved response times for service requests.
- Spearheaded efforts to standardize logistics protocols across departments, enhancing communication and coordination, which contributed to a more cohesive workflow that improved project delivery timelines.

PROJECTS

Crate Digger - React, Tailwind CSS, Auth0, Rest API (Spotify API & Discogs API)

https://github.com/DavidRod1865/crate_digger

- Crate Digger seamlessly integrates Spotify playlists with Discogs, enabling vinyl enthusiasts to discover and collect vinyl records of their favorite tracks. It's the go-to platform for those looking to merge the timeless appeal of vinyl with the convenience of modern digital music.

Kaiju Klimate - Vite, Tailwind CSS, Clerk, Convex

https://github.com/DavidRod1865/kaiju_klimate

- A Kaiju-themed weather app delivering real-time, location-based forecasts and a 5-day outlook. Integrated a weather API to dynamically fetch and process data, ensuring precise and up-to-date weather information for users in an engaging and unique format.

TaskTransit - React, Tailwind CSS, Django, Django Rest API

https://github.com/DavidRod1865/task_transit

- TaskTransit is an intuitive web application built to streamline file tracking through key milestones such as "Customs Released," "Arrived," and "Delivered." It provides robust features for adding, modifying, and removing file entries, while effortlessly updating delivery statuses for enhanced workflow efficiency.

EDUCATION

CUNY Queens College

Degree: Bachelors of Art

Field: Computer Science

Expected Graduation: May 2025
